

MoMath Mazes

4 October 2021

Jim Stevenson

I found these mazes on Twitter and thought they might make a relaxing puzzle interlude. They come from photographs of the street in front of the Museum of Mathematics (MoMath) in New York (Figure 1 and Figure 2). The idea is to traverse the mazes from the Start to the Goal making only *right* turns. It was difficult working out the pattern of the green maze, especially the upper right corner.

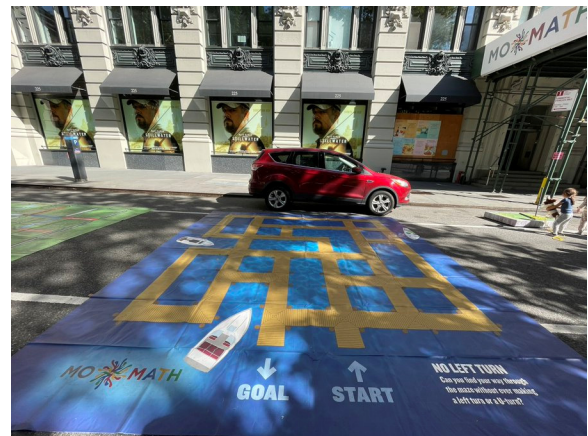

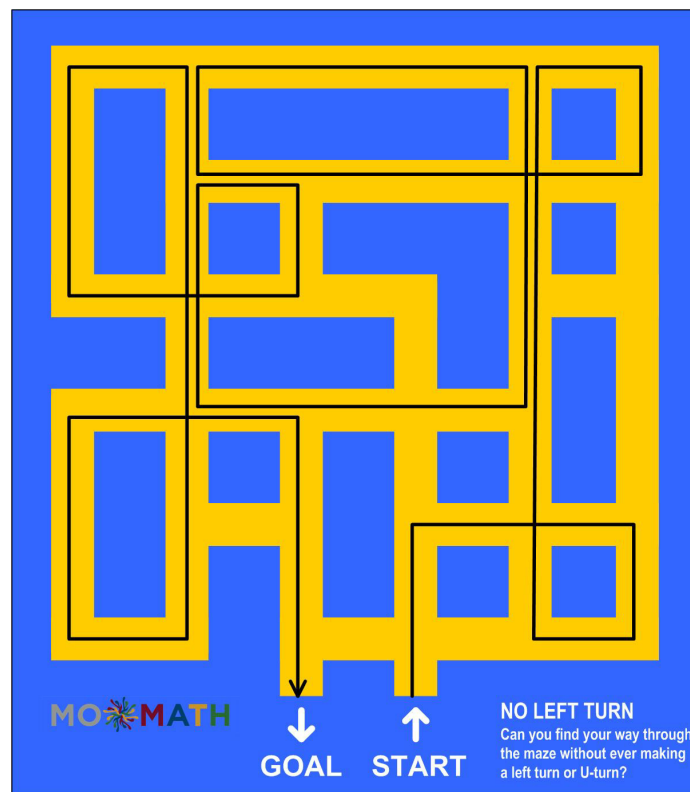

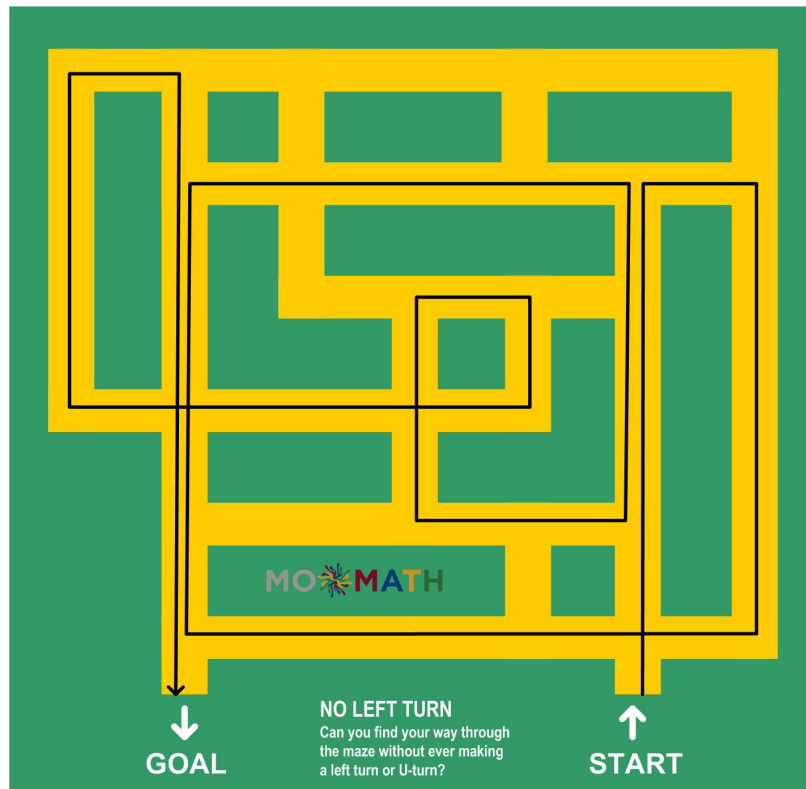

Figure 2²

Solution

These are not hard to solve, but they cause a little bit of thinking, which is fun. I don't think there are alternative solutions to what I propose.
